

Release Notes 1.4.2

8/26/02

The following items have been moved (migrated) to Production for use by Agencies beginning on August 26, 2002.

- A modification was made to the way SF 50s were printing related to the NTE date. The NTE date is now printing next to the nature of action description.
- The union tables were updated with values for LIUNA local 205, 580, 427, and 563. These values were added for IHS.
- There were incidents where users were trying to hire a new employee but they received an error upon saving. It said the data was conflicting with other data in the database. This error referred to the system erroneously trying to give out the same Employee ID to two employees. A fix was migrated to insure this would not occur again.
